

FEATURES

- Offered in 2 RU size
- Rugged .125 aluminum, black powder coat finish
- Completely welded assembly
- Panel face is angled at 45 degrees
- May be inverted to recess connectors
- Relieves stress on connectors and hanging connectorized cables
- Ideal for large connectors: multi-pin, triax, etc.
- Engraving can be added to the opposite surface to clearly identify connectors
- Add connectors to complete the assembly

The RCI Custom Products **RP Series RP45 Panel** is best utilized when rack mounting large cable connectors such as Triax or Multi-pin connectors or where strain relief on the cable and connectors is desirable or necessary.

The rugged .125 aluminum assembly is aesthetically welded and ground at every seam for superior strength and rigidity, and finished in a durable Black powder coat. The face of the panel is angled at 45 degrees to allow cabling to be more easily attached to the panel mounted connectors. When affixed, cables hanging down at 45 degrees greatly reduce the stress and strain on the cable and associated connectivity.

The 45 degree panel may be installed and oriented in bulkhead or inverted fashion to recess the bulkhead connections and help protect the field cables when attached. Engraving and/or connectors may be added to the opposite surface to identify each connector above or below it. Available in 2 RU size only.

P/N	Description
RP45	2 RU, 45 degree panel, Black Powder coat

A & E SPECIFICATIONS

45 Degree panels shall be the RCI Custom Products model RCIRP45. The panels shall be .125 aluminum, completely welded and ground for aesthetics and strength, and furnished in black powder coat for durability. Panels shall be rack mounted in either protruding or bulkhead fashion as specified.
